Pressure transducers

The PAT-Krüger pressure transducers measure high static and dynamic pressure values of liquids or gases in rough operating environments. Measuring precision is maintained even during continuous operation at extremely dynamic pressure. The pressure transducers come with a pressure connector with standardized G_{1/4} A thread. The matching hydraulic adapter is available as accessory.

These pressure transducers are preferably used as part of a PAT-Krüger load moment indicator system or PAT-Krüger control system in hydraulic systems for cranes. Since the pressure transducers are suitable for rough environments, they also offer an ideal solution for control and automatic control applications in hydraulic systems of construction equipment, and conveyor and lifting equipment.

- High accuracy
- High overload capacity and endurance limit
- Very rugged design
- Great operating reliability under extreme conditions
- Cost effective solution
